

icom Connectivity Suite – VPN

Transparent remote access to plants and machinery

The icom Connectivity Suite – VPN is an INSYS icom service for the simple and secure networking of locations, systems or mobile devices via a VPN network. The PCs and routers which are networked via the icom Connectivity Suite – VPN as well as the locally connected network devices (e.g. controls or measuring devices) are accessible in all networks. Simple rules can be used to define which participant

is allowed to connect to whom and which connections are not possible. The integration and administration of the devices couldn't be easier: configuration files and certificates are generated by the service and, thanks to the quick start wizard, automatically uploaded in the case of INSYS icom routers. Neither your own infrastructure nor IT specialists are required.

Main advantages

- Easy setup and management
- Transparent network monitoring
- Status display for connections in use
- Unlimited users and parallel connections
- Two free licences
- Operating time guarantee and unlimited data traffic
- Two-factor authentication
- Multiple ISO 27001 certified computer centres
- Security groups with configurable IP address, ports and protocols
- China VPN with reliable access to devices in mainland China
- Integration into the icom Data Suite for data collection and transmission
- Very high scalability
- Competitive prices and predictable costs

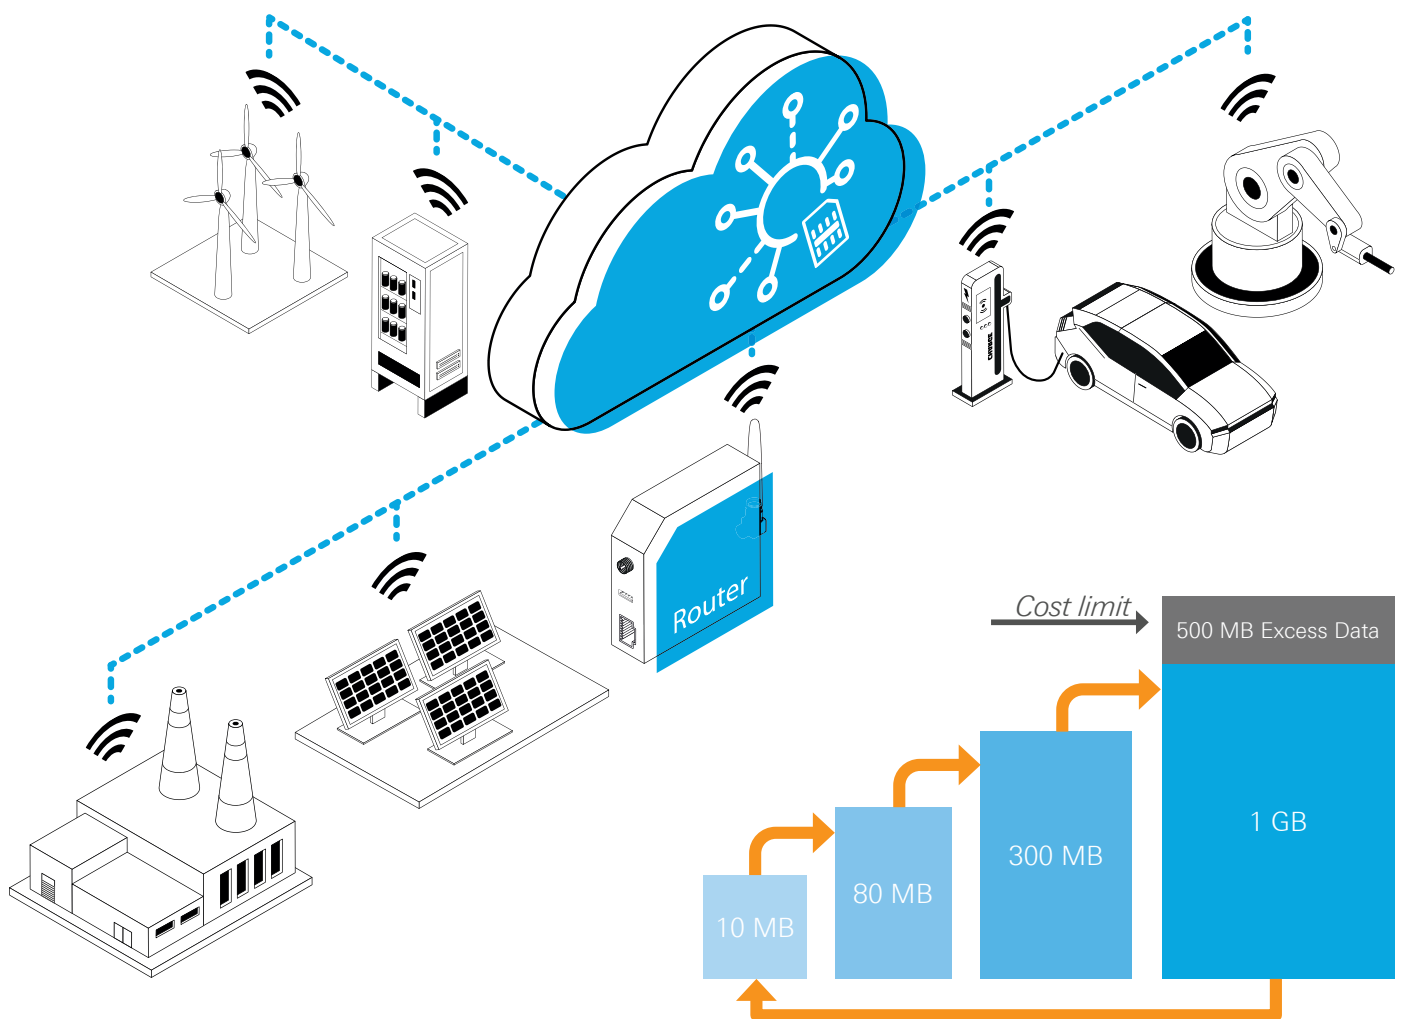

icom Connectivity Suite – M2M SIM

Premium SIM services and management for maximum availability in M2M and IoT applications

The M2M SIM services from INSYS icom feature flexible tariff models, fair billing and a wide range of additional services. The professional SIM cards meet the needs of industrial applications, demanding IoT projects and machine-to-machine communication. Thanks to the multi-roaming function, your SIM card is always

connected to the best network and your application is reliably accessible. The volume of the SIM cards included in a tariff plan forms a common pool. In addition, the SIM cards can be actively managed via the management portal and thanks to cost limits and short contract terms, you always have your costs under control.

Main advantages

- Multi-roaming in national and international networks
- Unsteered roaming – no dependence on preferred providers
- SIM management portal
- Professional M2M SIM services from the very first card!
- Flexible pooling of inclusive volumes within a tariff plan
- Cost limit protects against escalating costs
- Optional: smart cost control for automatic tariff adjustment
